# Proposed ELO ranking for PUGs

#### RedFox

June 5, 2013

#### Scoring

	Winner	Loser
3 maps	0.6	0.4
2 maps	0.75	0.25
1 map	1.0	0.0

### Expected score

A teams rating is the average rating of its players:  $R_a = \langle \vec{r_a} \rangle$ ,  $R_b = \langle \vec{r_b} \rangle$  A difference of 200 rating points would mean that the stronger team has an expected score of approximately 0.75. The expected scores (using the logistic curve):

$$E_a = \frac{1}{1 + 10^{(R_b - R_a)/400}}$$

$$E_b = \frac{1}{1 + 10^{(R_a - R_b)/400}}$$

# New rating

With the actual scores  $(S_a, S_b)$  and the k values of the players in each team  $(\vec{k_a}, \vec{k_b})$  the updated ratings are

$$\vec{r_a}' = \vec{r_a} + \vec{k_a} \left( S_a - E_a \right)$$

$$\vec{r_b}' = \vec{r_b} + \vec{k_b} \left( S_b - E_b \right)$$

# K-factor

Rating	K-factor
<2100	32
2100-2400	24
>2400	16
